

1.

- a. I've completed all the pass, credit, and distinction tasks that are provided up to week 7. I don't have any overdue task as far as now, but there are some tasks on progress that I have to complete within 2 weeks.
- b. As mentioned in my previous learning plan 3.4p, most the methods and strategies worked very well, to be more specific, self-study, practicing problems and taking short notes helped me very well and went according to the plan.
- c. Again, as mentioned in the previous plan, time management was challenging. Especially when I have to study the lecture notes, watch videos related to the module, understand them and at the same time I have to complete the assignments on time without having an overdue. Since I changed my time allocation last time from 25 to 30 hours per week, I was able to handle it all a bit easily. But still it was a tight schedule and sometimes overlaps with other modules as well.
- d. I'm planning to allocate more time for this module. Increment it by 35 hours per week which should be enough to handle the study load and assignments. I need to practice more questions and writing HDL codes to improve my skills and knowledge in this module.
- e. Time management seems to be an impact, in order to balance the studies and assignments of all modules along with computer systems. I need to work hard a bit related to the module and completing the assignments within the given deadline since I have to complete all the pass tasks, credit tasks, and also the distinction tasks allocated for the week and also start working on the H. Distinction task, which I have to complete at the end of the module. Not only tight due dates but external factors such as transportation problems, technology failures, health issues and sometimes unforeseen events such as natural disasters and electricity disconnection might also affect me negatively.
- f. So, to mitigate these risks I plan to put up a detailed study schedule for the upcoming weeks and exploring alternative study location to relax my mind and avoid any disruptions. As mentioned before, I will be incrementing the time allocated per week to study this module which will help me a lot, even if it takes me to stay up all night, I will push my boundaries and come out of my comfort zone if needed.

2. Yes, the time allocated per week for this module needs to be updated from 30 hours to 35 hours per week. But I keep the days allocated for that as same as before, which are Wednesdays, Fridays, Saturdays, and Sundays, as these are generally more ideal to focused study according to me.
